

IDEA 1: white box attack wallpaper

An image is generated to be used as a desktop wallpaper, based on the previous desktop but with every desktop image copied, and offset or randomly arranged so the real images are harder to find

IDEA 2- three js glass simulator to play on trompe l'eoil

Recreate one of the popular trompe l'oeil wallpapers using the glass shader in three.js- i.e., upload a wall of 3d modeled droplets, and the viewer can rotate the environment to change the angle the light passes through them

IDEA 3- hover over wallpapers to reveal phone

Preloaded wallpapers are categorized based on color, layout and style of imagery. Hovering over reveals them on the original phone
